

Academic Innovation Partnership

A pilot-ready institutional program for innovation thinking, research quality, invention capability and future readiness.

Vice-Chancellors, Principals, Deans, HoDs and Innovation Leaders

**Start with one cohort. Prove value.
Scale what works.**

The engagement begins with one institutional priority, develops capability through applied work and ends with participant-owned outputs that academic leadership can review.

Strong institutions do not only deliver curriculum. They create environments where students and faculty learn to discover important problems.

Courses, projects, research activity and innovation cells already create valuable opportunities. The gap is often the connection between problem selection, rigorous thinking, invention awareness, evidence and follow-through. A focused intervention can make that connection visible and repeatable.

THE SHIFT

From isolated activities to a visible capability pathway.

One cohort works through a common method for discovering problems, challenging assumptions, building evidence and deciding what deserves further research, prototyping or IP attention.

WHAT LEADERSHIP CAN REVIEW

A concise pilot summary showing participant outputs, promising opportunities, evidence, owners, next milestones and recommendations for continuation.

VISIBLE OUTPUTS

01

Cohort capability baseline and opportunity map

02

Participant-owned problem, research or invention portfolio

03

Shortlist of high-potential research, prototype or IP opportunities

04

30, 60 or 90-day continuation plan for the institution

Designed to be easy to start and easy to evaluate

Pilot + leadership review

Begin with one cohort and one measurable capability. Review the evidence after the pilot before deciding whether to deepen, repeat or scale the engagement.

A structured path from insight to visible action.

The method is contextualised to the institution, discipline and cohort while keeping the decision path simple and transparent.

01

Diagnose

Clarify the cohort, current gap, institutional priority and desired change.

02

Discover

Work on real tensions and identify problems that are specific, consequential and worth solving.

03

Develop

Use structured creativity, research reasoning, evidence and IP lenses to build stronger directions.

04

Decide

Review outputs, identify the most promising work and define owners and next milestones.

PARTICIPANTS LEAVE WITH

Institutional readiness canvas, problem discovery tools, participant workbooks, research and novelty lenses, responsible AI prompts, IP decision tools, pilot summary and continuation roadmap.

WHO SHOULD PARTICIPATE

Academic leadership, research and innovation cells, faculty cohorts, doctoral supervisors, student innovation groups, placement teams and interdisciplinary project cohorts.

Research depth, invention experience and practical facilitation.

Dr Amar Banerjee

INNOVATION LEADER • RESEARCHER • INVENTOR • FACILITATOR

Dr Amar Banerjee brings more than twelve years across AI, applied R&D, research, invention, teaching and capability building. His work connects rigorous problem framing with research quality, patents and practical innovation.

CREDIBILITY SIGNALS

granted patents

LOW-RISK STARTING PATH

01

Choose one cohort

Agree the audience and one capability to strengthen.

02

Define one measurable change

Clarify the participant output or behavior leadership should review.

03

Run the pilot and review

Use evidence to decide whether and how to continue.

START WITH ONE COHORT

Choose one cohort and one capability you want participants to demonstrate differently after the engagement.

Scope, format and investment follow only after the desired outcome and cohort are clear.
