

Innovation in Academia

An applied faculty lab for stronger research questions, defensible contribution, invention awareness and partnership readiness.

Faculty, HoDs, Deans, Research Supervisors and Innovation Cells

Move beyond the next paper towards research that is easier to defend, extend and translate.

Faculty work on real research directions, test why the problem matters, examine novelty and evidence, and leave with a practical pathway towards experiments, IP, collaboration and funding conversations.

Publication activity is valuable, but institutional differentiation depends on the quality of the problems a research community chooses to pursue.

Research programs can become incremental when literature gaps, beneficiary value, novelty, evidence design, IP choices and external collaboration are treated as separate decisions. This lab connects those decisions before substantial time is invested.

THE SHIFT

From routine extensions to consequential, defensible contribution.

Participants learn to identify underexplored problems, articulate a meaningful contribution and test whether the research direction deserves stronger experiments, IP consideration or external partnership.

WHAT LEADERSHIP CAN REVIEW

A visible faculty portfolio of research problems, novelty questions, experiment priorities, IP opportunities and possible collaboration routes.

VISIBLE OUTPUTS

01

Portfolio of consequential research problems

02

Novelty, contribution and evidence canvas

03

Publication, patent and partnership decision lens

04

30-day experiment and engagement roadmap

A practical faculty capability intervention

One-day lab or short series

The lab focuses on work participants already care about. It does not promise publication, patents or funding; it improves the quality of the questions, evidence and decisions that precede them.

A structured path from insight to visible action.

Each stage converts an abstract innovation concept into a visible faculty-owned research output.

01

Select

Identify research tensions with scientific, societal or industry consequence.

02

Frame

Clarify contribution, beneficiaries, urgency, assumptions and what would make the work matter.

03

Challenge

Use structured creativity and contradiction thinking to explore non-obvious directions.

04

Test

Stress-test novelty, non-obviousness, evidence needs and obvious reviewer questions.

05

Position

Decide how publication, patent, partnership or funding routes may interact.

06

Act

Define the next experiment, owner, collaborator and review milestone.

PARTICIPANTS LEAVE WITH

Faculty workbook, research problem landscape, contribution canvas, novelty and non-obviousness prompts, inventive-thinking tools, reviewer-first checklist, publication-to-patent lens and action roadmap.

WHO SHOULD PARTICIPATE

University and college teachers, heads of department, deans, research supervisors, lab leaders, doctoral mentors and institutional research or innovation cells.

Research depth, invention experience and practical facilitation.

Dr Amar Banerjee

INNOVATION LEADER • RESEARCHER • INVENTOR • FACILITATOR

Dr Amar Banerjee is a researcher, inventor, educator and innovation facilitator with more than twelve years across AI, applied R&D, healthcare, industrial systems and capability building.

CREDIBILITY SIGNALS

30+

publications

25+

filed patents

7

granted patents

LOW-RISK STARTING PATH

01

Choose one cohort

Agree the audience and one capability to strengthen.

02

Define one measurable change

Clarify the participant output or behavior leadership should review.

03

Run the pilot and review

Use evidence to decide whether and how to continue.

START WITH ONE COHORT

Bring one faculty cohort and one research priority that deserves sharper questions and stronger evidence.

Scope, format and investment follow only after the desired outcome and cohort are clear.
