

The Modern-Day Professional

An applied capability lab for employability, innovation confidence, responsible AI judgement and professional relevance.

Final-Year Students, Postgraduates, Doctoral Scholars and Early-Career Talent

Help students translate academic knowledge into visible judgement, contribution and adaptability.

Participants connect what they know with problem discovery, evidence, communication, responsible AI use and inventive problem-solving, then convert the work into an employer-ready capability story.

Students may have strong credentials and tool familiarity yet still struggle to explain how they think, decide and create value.

Academic projects often show what was built, but not why the problem mattered, what trade-offs were made, what evidence supports the contribution or how the student would adapt in an ambiguous professional environment.

THE SHIFT

From credentials and tools to an evidence-based capability portfolio.

Participants learn to recognise useful problems, explain decisions, use AI responsibly, demonstrate contribution and build a visible next-step plan.

WHAT LEADERSHIP CAN REVIEW

Professional stories, opportunity maps, applied problem-solving outputs and a 60-day readiness sprint that faculty and placement teams can review.

VISIBLE OUTPUTS

01

T-shaped capability and opportunity map

02

Employer-ready evidence story

03

Applied innovation challenge and decision log

04

60-day learning, portfolio and collaboration sprint

A practical bridge from campus to contribution

One-day lab or short series

The program is designed to complement technical training, not replace it. The focus is on judgement, communication, problem selection, responsible AI use and evidence of contribution.

A structured path from insight to visible action.

The flow helps participants see themselves as adaptable problem-solvers rather than passive applicants.

01

Recognise

Understand how AI, ambiguity and changing roles alter the value of human judgement.

02

Discover

Find problems worth solving by connecting trends, stakeholder needs and personal capability.

03

Explain

Turn project experience into a clear story of problem, decision, evidence, contribution and learning.

04

Invent

Use structured creativity to create differentiated approaches to a real challenge.

05

Judge

Stress-test risk, ethics, evidence, AI use and likely failure modes.

06

Build

Create an employer-relevant pitch and a 60-day capability sprint.

PARTICIPANTS LEAVE WITH

Capability workbook, opportunity map, professional story template, responsible AI decision prompts, inventive problem-solving tools, evidence checklist, pitch structure and 60-day sprint canvas.

WHO SHOULD PARTICIPATE

Final-year undergraduate and postgraduate students, doctoral scholars, research associates, placement cohorts and interdisciplinary student innovation teams.

Research depth, invention experience and practical facilitation.

Dr Amar Banerjee

INNOVATION LEADER • RESEARCHER • INVENTOR • FACILITATOR

Dr Amar Banerjee combines enterprise technology leadership, research, patents, teaching and facilitation to make complex innovation and AI concepts usable for diverse student audiences.

CREDIBILITY SIGNALS

30+

publications

25+

filed patents

7

granted patents

LOW-RISK STARTING PATH

01

Choose one cohort

Agree the audience and one capability to strengthen.

02

Define one measurable change

Clarify the participant output or behavior leadership should review.

03

Run the pilot and review

Use evidence to decide whether and how to continue.

START WITH ONE COHORT

Choose a student cohort that should leave campus better able to connect knowledge, judgement and evidence with professional value.

Scope, format and investment follow only after the desired outcome and cohort are clear.
