

Connecting Technology to Emotions

An interdisciplinary innovation lab for human-centred AI, trust, inclusion and responsible technology design.

Students, Faculty, Researchers, Designers and Innovation Teams

Dr Amar Banerjee

Use human experience as evidence for better technology decisions.

Participants examine trust, anxiety, agency, belonging and inclusion as signals of unmet needs, then turn those observations into responsible, differentiated technology concepts.

Technical capability alone does not determine whether people understand, trust or adopt a technology.

Feature-led development can miss emotional tensions, trust barriers, inclusion needs and moments where users lose confidence or agency. These signals are not decoration; they can reveal meaningful design and research problems.

THE SHIFT

From feature iteration to evidence-led human experience innovation.

Participants combine empathy evidence, journey mapping, responsible AI judgement and inventive thinking to create concepts people can understand, question and trust.

WHAT LEADERSHIP CAN REVIEW

Human-technology tension maps, experience principles, differentiated concepts, trust and ethics checks, and a prototype-ready value story.

VISIBLE OUTPUTS

01

Evidence-grounded emotion and experience journey

02

Human-technology tensions and design principles

03

Differentiated concepts with explicit safeguards

04

Prototype brief with trust, inclusion and ethics checks

A strong interdisciplinary cohort experience

One-day design lab

The lab creates a common language across engineering, design, management, psychology and AI by using real human situations and explicit decision criteria.

A structured path from insight to visible action.

The sequence moves from human evidence to responsible, differentiated technology concepts.

01

Notice

Recognise trust, anxiety, agency and belonging as design and innovation signals.

02

Listen

Use evidence-aware empathy methods to identify unmet human needs without overclaiming what users feel.

03

Map

Create an experience journey and isolate the moments where technology creates friction or loss of agency.

04

Invent

Use structured creativity to resolve tensions such as privacy versus personalisation or automation versus control.

05

Stress-test

Convert trust, inclusion, ethics and misuse risks into explicit design requirements.

06

Prototype

Build a testable concept with value, safeguards, evidence needs and responsible evaluation criteria.

PARTICIPANTS LEAVE WITH

Participant workbook, empathy prompts, experience journey canvas, human-technology tension map, inventive-thinking tools, trust and ethics checklist, prototype brief and evaluation questions.

WHO SHOULD PARTICIPATE

Engineering, design, management and psychology students; teachers and researchers in HCI and AI; academic incubators, product labs and interdisciplinary innovation cohorts.

Research depth, invention experience and practical facilitation.

Dr Amar Banerjee

INNOVATION LEADER • RESEARCHER • INVENTOR • FACILITATOR

Dr Amar Banerjee brings experience across AI, healthcare, industrial systems, responsible technology, research, teaching and innovation facilitation, with a focus on making complex systems understandable and useful.

CREDIBILITY SIGNALS

30+

publications

25+

filed patents

7

granted patents

LOW-RISK STARTING PATH

01

Choose one cohort

Agree the audience and one capability to strengthen.

02

Define one measurable change

Clarify the participant output or behavior leadership should review.

03

Run the pilot and review

Use evidence to decide whether and how to continue.

START WITH ONE COHORT

Bring an interdisciplinary cohort and one human-technology tension worth understanding before building the next feature.

Scope, format and investment follow only after the desired outcome and cohort are clear.
