

Connecting Technology to Emotions

An interdisciplinary design and innovation lab for human-centred AI, trust, inclusion and responsible technology.

Students, Faculty, Researchers, Designers and Innovation Teams

Dr Amar Banerjee

Innovation Leader • Researcher • Facilitator

Use human emotions as signals for better technology design

Participants examine trust, anxiety, agency, belonging and inclusion as sources of technology problems, then build differentiated concepts with explicit ethical safeguards.

WHY THIS MATTERS

Technology succeeds or fails through human experience, not technical capability alone.

Feature-led development can miss emotional tensions, trust barriers, inclusion needs and the moments where people lose agency or confidence.

THE SHIFT

From feature iteration to meaningful, responsible experience innovation.

Participants combine empathy evidence, journey mapping, responsible AI judgement and inventive thinking to create concepts people can understand and trust.

WHAT LEADERSHIP SEES

Human-technology tension maps, experience principles, differentiated concepts, trust and ethics checks, and a prototype-ready value story.

VISIBLE OUTCOMES

01

Emotion journey map grounded in evidence

02

Human-technology tensions and design principles

03

TRIZ-generated differentiated concepts

04

Prototype with trust, inclusion and ethics checks

An interdisciplinary innovation experience

One day | Design and prototype lab

The program connects engineering, design, management, psychology and responsible AI through real human situations and practical prototype decisions.
Dr Amar Banerjee • Innovation Leader • Researcher • Facilitator

A structured path from insight to action.

The sequence moves from emotional evidence to responsible, differentiated technology concepts.

01

Technology is emotional

Recognise trust, anxiety, agency and belonging as innovation signals.

02

Find unmet human needs

Use empathy interviews and bias-aware observation.

03

Map moments that matter

Build personas, emotion journeys and evidence-backed tensions.

04

Invent around tensions

Use TRIZ for privacy, personalisation, control, care and inclusion.

05

Reverse the failure modes

Turn trust and ethics risks into differentiated design requirements.

06

Prototype with care

Pitch value, emotional signals, safeguards and responsible testing.

INCLUDED

Practical tools, not passive at- tendance.

Participant workbook, empathy interview prompts, emotion journey canvas, human-technology tension map, TRIZ tool cards, IP lens, trust and ethics checklist, prototype brief and participation certificate.

WHO SHOULD PARTICIPATE

Engineering, design, management and psychology students; teachers and researchers in HCI and AI; product, UX and innovation teams; academic incubators and interdisciplinary cohorts.

Research depth, leadership context and practical facilitation.

Dr Amar Banerjee

INNOVATION LEADER • RESEARCHER • FACILITATOR

Dr Amar Banerjee brings experience across AI, healthcare, industrial systems, responsible technology, research, teaching and innovation facilitation, with a strong focus on making complex systems humanly understandable.

WHY THIS FACILITATION MODEL WORKS

- Context is shaped around a real institutional or organisational challenge.
- Participants create visible outputs and decisions during the engagement.
- Complex innovation ideas are translated into practical, usable tools.
- Every program ends with a continuation path, owners and next steps.

ENGAGEMENT PATHWAY

01

Clarify the priority

Audience, context, evidence, constraints and desired outcome.

02

Shape the experience

Select the right modules, format, examples and participant outputs.

03

Facilitate and continue

Produce action-ready work and a 30, 60 or 90-day path.

START WITH ONE REAL CHALLENGE

Build a cohort that can design useful technology without losing trust, agency or inclusion.

The first conversation focuses on whether there is a credible path to value. Scope and investment follow the agreed outcome.
